

# Rain & Repair Pipe Collar

**UV Resistant • Fast & Easy Installation • Lifetime Warranty**

IPS Roofing Products Rain and Repair Collars are an economical solution that can be used over newly installed vent pipes as well as any brand of damaged or leaking flashing. Combining a Rain Collar with an IPS No Caulk flashing creates the IPS Double-Collar System™ for a leak proof roof. The Rain and Repair Collar provides a second water tight seal, protecting against potential leaks caused by vent pipe movement and UV rays. IPS Rain & Repair Collars are guaranteed for the life of the current roof.

## To install an IPS Rain Collar:

- 1** Identify your pipe size and match to size printed on the top of the rain collar; then determine if a ring needs to be removed for proper fit when using multi-size collars.
- 2** If removal of ring is required, use pliers to simply grab the tab adjacent to the pipe size required, push down to separate at the score, and then pull up to remove the ring.
- 3** Slide the rain collar over the pipe on top of the existing flashing; the collar creates a water tight seal on its own and no caulk is necessary.
